

Advanced Diploma of Civil Construction Design

National ID: RII60520 | State ID:BGK5

Construct your future

Looking for the skills to participate in the creation of infrastructure facilities such as roads, railways, buildings, water reservoirs, subdivisions, airports, bridges, sewer systems, tunnels, dams and other public works? Establish yourself in this expanding industry and step towards a future in civil construction management with the Advanced Diploma of Civil Construction Design.

This course will provide students with the knowledge and skills needed for the roles of senior civil works designers, or para-professional designers who support professional engineers. Once graduated, you will have the expertise to perform tasks that are broad, specialised, complex, technical, and include strategic areas and initiating activities.

You will possess the skills required for the design of complex projects to ensure the implementation of the client site requirements, as well as possessing the technical knowledge to initiate solutions to problems or management requirements.

Gain these skills:

- Managing the civil works design process
- Managing program risk
- Application of safe design principles
- Establishing & maintaining a quality system

Your qualification prepares you for roles such as:

Engineering Manager
