

Certificate IV in Information Technology (Web Development)

National ID: ICT40120 | State ID:AC25

Enter the vast world of website design and development

Most businesses and organisations have an online presence and websites have become an essential part of any organisation looking to reach out to its target audience.

Upon completion of this qualification you'll be able to be involved in both the **design and technical development of a website**, designing and constructing web pages and creating the look and feel of the site. With your qualification you could find a career as an in-house designer or work in a design studio.

Our ICT40120 Certificate IV in Information Technology (Web Development) covers essential concepts including front end and back end development, and **leads into our Diploma of Web Development**. You'll be encouraged to develop the independent thinking and problem solving skills needed for communicating and working with clients in the Diploma course.

You will use the latest industry standard HTML5, CSS3, PHP, MySQL and JavaScript using a range of development tools.

Your qualification prepares you for roles such as:

Web Administrator, Web Master and Web Designer

Further Study Option(s)

Diploma of Information Technology (Back End Web Development)

Diploma of Information Technology (Front End Web Development)
