

MEM60112 Advanced Diploma of Engineering

National ID: MEM60112 | State ID:J368

Are you ready for a technically advanced engineering career?

Redefine your engineering future with the Advanced Diploma of Engineering. Develop specialised technical skills to step towards a future as an engineering technician, detailed drafter, or maintenance technician. Learn in an advanced training facility with industry-standard equipment and technology, to ensure that you graduate job-ready.

Gain these skills:

- carry out mechanical engineering drafting and design
- analytical work involving manufacturing and fabrication techniques
- understand the application of engineering principles, systems, and processes
- draw and design mechanical equipment
- maintain mechanical systems
- workplace health and safety

Your qualification prepares you for roles such as:

Graduates are typically employed in areas such as computer aided design and drafting, process plant drafting and design, machine drafting and design, air conditioning drafting and design, shipbuilding drafting and design, plant maintenance supervision (building on a trade background), and other general engineering and technical positions. Further Study Option(s) Completion of this course opens up a range of further study options, and may also produce advanced standing towards a relevant university degree. [Apply now](#)
